## Breast Cancer Screenings

### October is Breast Cancer Awareness Month \*Reminder\*

Molina Healthcare continues to deliver excellent customer service which includes preventative care services like, breast cancer screening. As we strive to improve HEDIS scores, we are asking physicians to help us raise Breast Cancer Awareness by recommending breast cancer screening.

#### Who should be screened?

The CDC recommends that women who are 50 to 74 years old and are at average risk for breast cancer to get a mammogram screen every two years. Women who are 40 to 49 years old should talk to their doctor or other health care professional about when to start and how often to get a mammogram.

#### Qualified Cancer Screening Tests

- Mammogram
- Breast Magnetic Resonance Imaging (MRI)
- Clinical Breast Exam
- Breast Self-Awareness

#### Additional Information

Patients can be screened for breast cancer at a clinic, hospital, or a doctor's office. Health insurance plans are required to cover mammograms every one or two years for women beginning at the age 40.

For more information about this measure, please contact Nichole M. Rodriguez at:
