Section III: Recovery and Discharge Plan

Discharge plans are an important tool to emphasize hope and plans for recovery. Planning for discharge from services should begin at the first contact with the individual. Recovery planning should include discussion about how the individual and service providers will know that the individual has made sufficient progress to move to a lower, less intensive level of care or into full recovery with a maintenance plan. ***These responses should reflect any updated understanding of the recovery and discharge plan since the last review. Within MST, completion of the Background Information Form and the Initial Strengths and Needs Assessment as well as general fidelity to the model within supervision and consultation may serve to demonstrate these questions are being considered and thus the provider may attach those forms rather than filling out this section.***
